I'm a 3rd-year B.Tech student in Artificial Intelligence & Data Science at Shiv Nadar University, Chennai. I love building intelligent backend systems and exploring generative AI models. I focus on turning ideas into powerful, scalable solutions — blending creativity, data, and engineering precision.
I'm currently working on AI-powered applications that combine NLP, ML pipelines, and modern APIs to deliver interactive, real-world systems.

EDUCATIONAL BACKGROUND

Shiv Nadar University, Chennai
- **Course:** Artificial Intelligence & Data Science
- **Year of Study:** 2023-expected2027
- **CGPA:** 8.37

Resonance Junior College, Hyderabad
- Higher Secondary Education, Board of Intermediate Education-Telangana
- **Year of Study:** 2021-2023
- **Percentage:** 95.7

CVR Memorial High School, Anantapur
- Board of Secondary Education
- **Year of Study:** 2010-2021
- **Percentage:** 100

TECHNICAL SKILLS

Languages:
Python, Java, C
Frameworks and Libraries:
Django, FastAPI, Streamlit, Pandas, Numpy, Matplotlib, Seaborn, SKlearn
Database:
MySQL
Tools and Platforms:
Git, GitHub, Postman, Tableau
Other:
Data Pre-Processing and Visualization, Machine Learning and Fine-Tuning, Rest API's

PROJECTS

SAM (Self Adaptive Music Intelligence)
- Developed a first-of-its-kind platform-agnostic voice first music assistant that unifies Spotify and SoundCloud via a scalable Adapter Layer architecture, designed for seamless extensibility to future platforms.
- Engineered a low-latency speech-to-action pipeline using Groq (Llama 3) with conversational context handling to interpret natural language and execute complex music commands.
- Created an immersive 3D audio-visual experience backed by an asynchronous FastAPI system, utilizing Celery and Redis to minimize latency and ensure real-time responsiveness.
- **Tools Used:** Python, FastAPI, React, TypeScript, Three.js, Groq Llama 3, PostgreSQL, Redis, Celery.
- SAM

Personal Portfolio Website
- Designed and developed a modern, responsive portfolio website to present projects, skills, certifications and experience
- Implemented Framer Motion for smooth, accessible animations and deployed via Vercel with a CI/CD pipeline for optimized global delivery.
- **Tools Used:** Next.js, React, Tailwind CSS, Framer Motion, Formspree, Vercel
- Portfolio

Career GPS
- Developed an AI powered Streamlit web application to generate personalized career roadmaps and track weekly progress. The application uses user input or up loaded resumes to suggest learning paths aligned with specific career goals and verifies recommendedresourcesusingreal-time web search.
- **Tools Used:** Python, Streamlit, Mistral-7B Instruct model(via OpenRouter API), Serper.dev(for real-time web search in RAG pipeline), SQLite3, Matplotlib
- CareerGps

Fire Weather Index prediction
- Developed a Machine Learning classification model to predict forest fire occur rences using environmental data (temperature, humidity, wind, rain, etc).
- **Tools Used:** Python, Numpy, Pandas, Matplotlib, Seaborn, Scikit-learn, Flask, HTML
- FWI Prediction

Event Management System
- Developed a multi-page Streamlit web application to serve as a centralized plat formfor college event management.
- **Tools Used:** Python, Streamlit, SQLite3, Werkzeug(for data privacy)
- Event Management System
